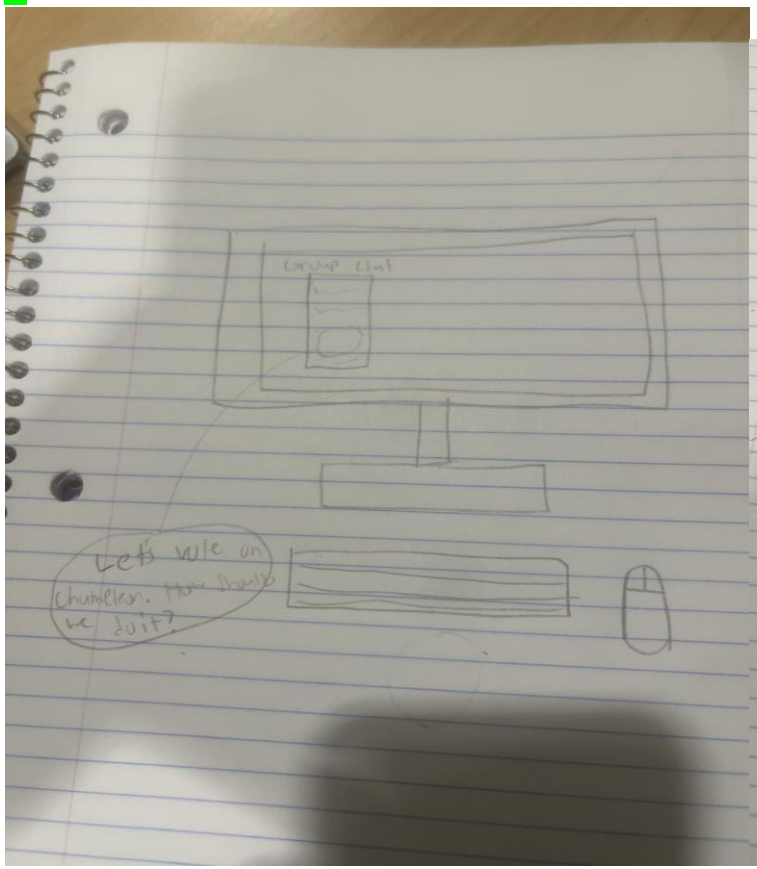
PERSONA: Jimmy: A Website Gamer / Website Visitor

USERSTORY/SCENARIO: Guessing The Chameleon

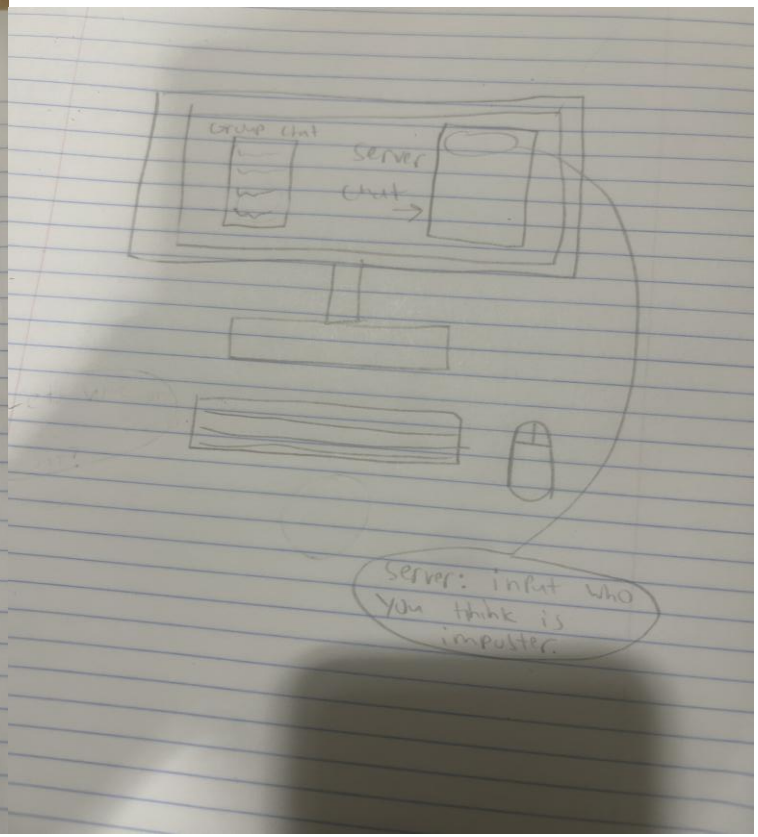
Name/PROJECT/TEAM: Natal Sabbar / CS 321-006 / Chameleon

DATE: 03/26/2026

1.

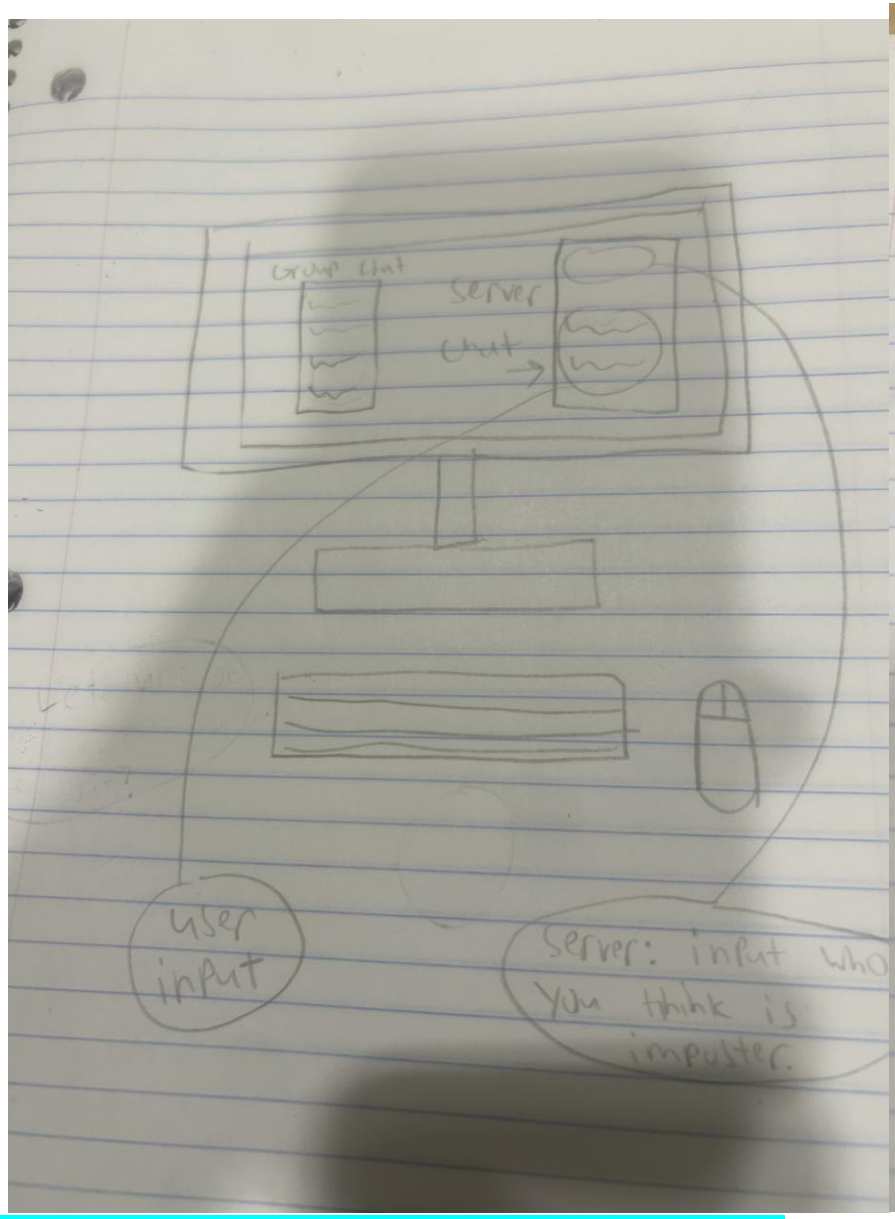


2.

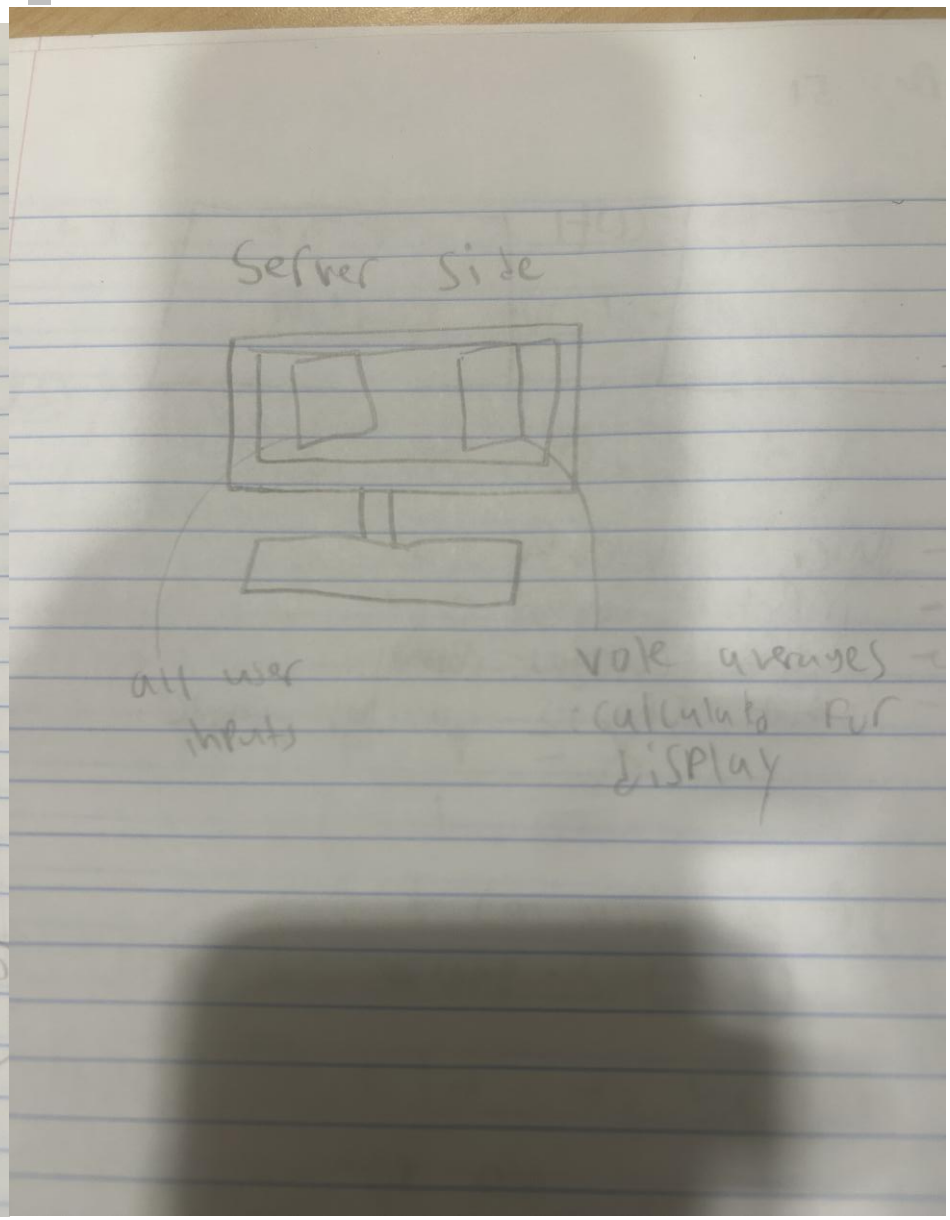


- Communication back and forth within the group comms.
- Players decide its time to attempt to vote out the chameleon. Can be determined based on the timer or by players readiness.
- Server creates a display text for all players within the game.
- Group chat servers were closed off meanwhile.

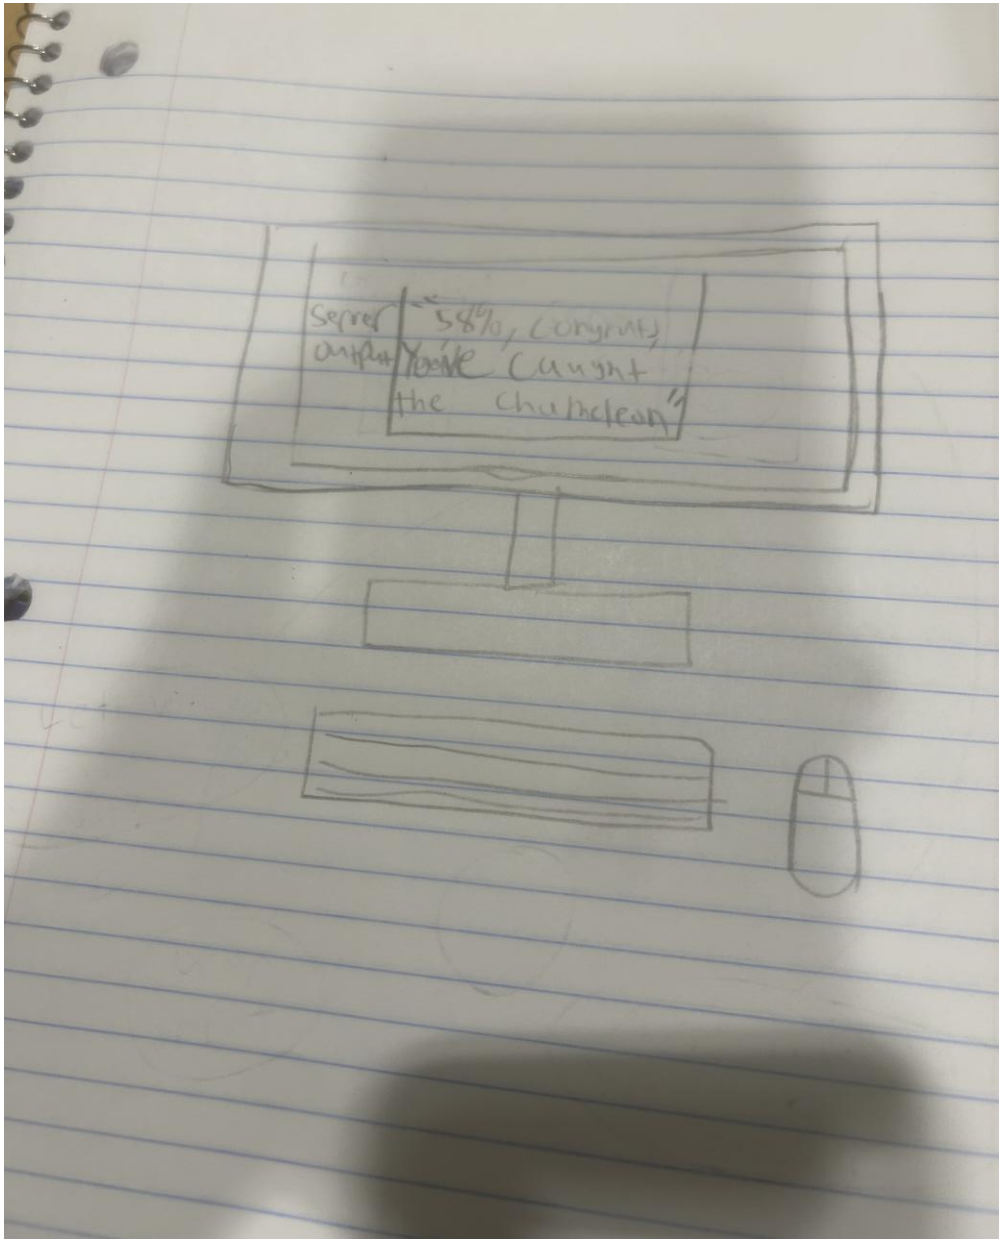
3.



4.



-
- Server collects the users' input as separate values in a data table.
- Server determines for a fact if the input is one of the names in the game or not.
- Server calculates if over 50% of players correctly guessed the correct chameleon.



- Override the two chat services and print out a statement.
- Statement printed out determines if the votes averaged out to be in favor of correctly or incorrectly guessing the chameleon.
